How does Makers Making Change work?

People with disabilities and disability professionals suggest ideas and request devices from our open source library.

Makers in the community, like educators, makerspace members, and hobbyists, volunteer their skills, tools, and time to build requests and ideas. Users only pay for the material costs.

Makers Making Change is for you if:

- Commercial devices don't address your needs
- Commercial devices are unaffordable
- You're looking for a customized device

Connecting people with disabilities to affordable assistive technology

NEIL SQUIRE SOCIETY'S

Makers Making Change

www.MakersMakingChange.com

What is Makers Making Change?

Makers Making Change is an initiative run by the Research and Development department at the Neil Squire Society.

The initiative addresses issues faced by people with disabilities by utilizing the *open source* and maker movement to create affordable assistive technologies at the community level.

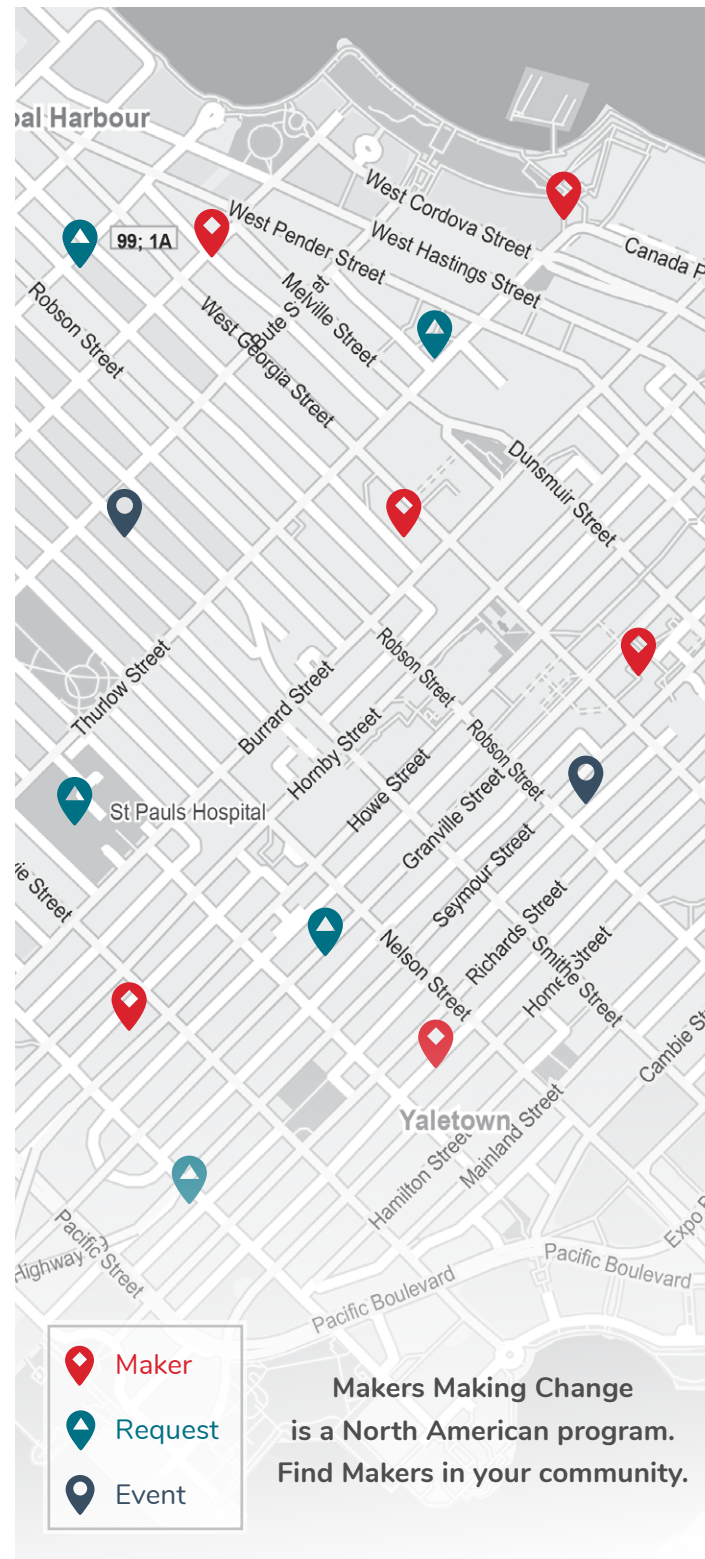

All projects on Makers Making Change are open source, allowing designs to be used, modified, and distributed free for personal use.

The Neil Squire Society is a Canadian national not-for-profit organization that has been empowering people with disabilities through technology for over thirty years.

See Neil Squire Society's full list of programs and services at: www.neilsquire.ca

Event

Makers Making Change is a North American program. Find Makers in your community.

Ways to Get Involved

CONNECT
People with disabilities can connect with local makers in their community

PROJECTS
Explore our library of vetted projects or suggest an idea for a build

EVENTS
Browse events where volunteers build and distribute assistive devices

MAKE A BUILD
Makers volunteer their skills to build a project or create a custom solution

FUND A BUILD
Donate the cost of a device for someone in your community

Search for what's happening in your community:
